The MFC framework provides a set of reusable classes designed to simplify Windows programming. MFC provides classes for many basic objects, such as strings, files, and collections that are used in everyday programming. It also provides classes for common Windows APIs and data structures, such as windows, controls, and device contexts. The framework also provides a solid foundation for more advanced features, such as ActiveX and document view processing.

### **Overview of Windows Programming in C++ | Microsoft Docs**

MFC was introduced in 1992 with Microsoft's C/C++ 7.0 compiler for use with 16-bit versions of Windows as an extremely thin object-oriented C++ wrapper for the Windows API. C++ was just beginning to replace C for development of commercial application software at the time. In an MFC program, direct Windows API calls are rarely needed. Instead, programs create objects from Microsoft Foundation Class classes and call member functions belonging to those objects.
