Big Data to Prevent Trains Passing Red Signals. Train accident risk could be lowered even further by using big data to reduce the chances of a train passing a red signal, according to rail industry body RSSB. Rail companies can now harness the power of big data to identify the signals which are most frequently approached at red, thanks to a new on-line tool developed by rail industry body ...

Then it identified the potential for improved methods that will enable testing of TCA equipment to be undertaken on vehicles undergoing maintenance anywhere in the depot, without need of the wheel/rail interface. These are capable of providing results to the same standard and integrity as the methods specified in RGS GM/RT2477.
