The Adolescent/Adult Sensory Profileenables clients from 11 through 65+ years to use a Self-Questionnaire for evaluating their behavioral responses to everyday sensory experiences. It provides a standard method to measure and profile the effect of sensory processing on functional performance.

**The Differences Between Adult & Pediatric Neurology ...**  
One of the key differences between adult and adolescent brains, highlighted by Kinscherff, is the lack of prefrontal cortex development in young brains. The prefrontal cortex controls humans' ability to: delay and reflect (the lack of development limits the amount of time juveniles will think before they act);

Malignancies in adolescents and young adults (AYA) pose a challenge for pediatric oncologists and, less frequently, for adult oncologists when it comes to patients' correct clinical management and access to the best possible treatments all over the world. 1 Since the beginning of this millennium, renewed efforts to deal with these issues have been made by lay and medical organizations. 2 ...

**Brief: The Developing Adolescent Brain**  
The skills of adult versus pediatric neuro-oncologists are not completely similar though additive. Because the tumors and their protocols are different and the tolerance and expected sequelae are specific. Multidisciplinary meetings including adult and pediatric neuro-oncologists are warranted to share expertise.

**The Adolescent and Adult Neuro-diversity Handbook ...**  
Jensen said, referring to the teen brain's high level of flexibility, or "plasticity," Neurons in an adolescent can build connections to other cells twice as quickly as neurons in an adult brain, which allows teens to absorb new information at a rapid-fire pace but also makes their brains more vulnerable to negative influences.

**Understanding the Adolescent Brain and Legal Culpability**  
About the Adolescent and Young Adult (AYA) Neuro-Oncology Program Dana-Farber Cancer Institute's Adolescent and Young Adult (AYA) Neuro-Oncology Program was established in 2020 to cultivate research and bring highly specialized care to adolescent and young adult patients (ages 15-39) diagnosed with central nervous system (CNS) malignancies, including brain and spinal cord tumors.

**High-grade gliomas in adolescents and young adults ...**  
The vast majority of brain cells are created before birth, but the massive numbers of connections between nerve cells occur during infancy. Pediatric neurology differs from adult neurology, because in children, the brain is still growing and developing, and neurological disorders present differently than those of adults.
