Chemical Castration With Intratesticular Injection of 20% ...

Castration in humans Edit. The practice of castration has its roots before recorded human history. Castration was frequently used in certain cultures of Europe, the Middle East, India, Africa and China, for religious or social reasons. After battles in some cases, winners castrated their captives or the corpses of the defeated to symbolise their victory and 'seize' their power.

Castration usually means removal of the testicles, which is where the male sex hormone, testosterone, is produced. At various times in history and in various cultures, boys have been castrated to serve as religious figures or servants, or to keep their singing voices in the upper register. These castrated boys are often called eunuchs or castrati.

Castration High Resolution Stock Photography and Images ...

The reason for the apparent discrepancy between the findings in the Chinese eunuchs and those in the Skoptzy and the Ottoman eunuchs is not clear, but it is of interest that the average age at which castration was performed was older in the Chinese group (average age at castration, 18 yr; less than a fourth had been castrated before age 14 yr).

Castration (also known as orchietomy or orchidectomy) is any action, surgical, chemical, or otherwise, by which an individual loses use of the testicles: the male gonad. Surgical castration is bilateral orchidectomy (excision of both testes), and chemical castration uses pharmaceutical drugs to deactivate the testes. Castration causes sterilization (preventing the castrated person or animal

Castration Human Male Images, Stock Photos & Vectors ...

Effects of castration are largely dependent on WHEN that castration takes place. A primary hypothesis that describes hormonal actions is called the 'organization and activation' model. During development in the womb, the body (more specifically the nervous system) is organized by high testosterone (if you're a male): male traits are emphasized while female traits are 'defeminized'.
